PROFESSIONAL SUMMARY

Full-stack engineer building web products across user interfaces, application logic, data, and cloud infrastructure. Experience includes a private client request platform, commercial billing and AI-powered workflows, and AWS architecture. Works with TypeScript, React, Next.js, Python, PostgreSQL, AWS, Docker, and CI/CD.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, Tailwind CSS, responsive interfaces

Backend and data: Node.js, Express, Python, FastAPI, REST APIs, PostgreSQL, Redis, MySQL, DynamoDB, Drizzle ORM, SQLAlchemy, Server-Sent Events (SSE)

Cloud and delivery: AWS Lambda, ECS/Fargate, API Gateway, S3, RDS, Cognito; Docker, Git, GitHub Actions, Vercel, Railway

PROFESSIONAL EXPERIENCE

White Label Resell | AI Backend Engineer

Remote, Los Angeles, CA | January 2025 - Present

- Rebuilt the article-generation backend as a parallel orchestrator supporting nine formats and up to 40 simultaneous articles, cutting bulk generation time by approximately 90%.
- Built the Stripe billing UI and backend, including atomic credit transactions, monthly plan allocations, and feature gating for a commercial platform.
- Built a private client request platform with a React/Next.js portal and internal Kanban workspace, backed by PostgreSQL and Prisma; implemented ticket workflows, comments, attachments, and role-aware access.
- Developed reusable UI components and server-side actions for request intake, ticket detail, assignment, activity history, and sprint planning; added unit and Playwright end-to-end tests for key flows.
- Implemented SSE progress updates and a hybrid browser/database checkpoint system so users can reconnect and resume interrupted jobs.
- Designed an AWS serverless proof of concept for a role-based operations platform for about 100 users; produced API specifications, VPC and database partitioning plans, and a cost model for client review.

PUBLIC CODE

Task Manager API | Public GitHub Project

- Built a containerized FastAPI/PostgreSQL service with JWT authentication, SQLAlchemy models, Alembic migrations, pytest tests, and GitHub Actions for test and Docker-build checks.

EDUCATION

Federal University of Technology Minna | B.Eng., Electrical and Electronics Engineering

Graduated February 2024 | Second Class Upper Division
